

# COOLSCULPTING

*Permanently Reduce Stubborn Fat*

## WHAT IS COOLSCULPTING?

The CoolSculpting is a non-invasive procedure that eliminates stubborn fat safely and effectively, without surgery or downtime. This fat reduction treatment is the only FDA-cleared procedure to use controlled cooling to safely target and eliminate diet- and exercise-resistant fat. CoolSculpting results are proven, noticeable, and lasting.

## HOW DOES COOLSCULPTING WORK?

Fat cells freeze at higher temperatures than surrounding tissues. CoolSculpting technology safely delivers precisely controlled cooling to gently and effectively target the fat cells underneath the skin. The treated fat cells are crystallized (frozen), and then die. Over time, your body naturally processes the fat and eliminates these dead cells, leaving a more sculpted you. There is no downtime associated with this procedure and you can return to your regular routine right away.

## WHAT AREAS CAN BE TREATED?

Permanent fat reduction is available for many areas of the body. The abdomen, flanks (love handles), back roll (bra strap), inner and outer thigh, and chin can all be treated with CoolSculpting. Your individualized treatment plan will be tailored to your body, your goals, and your budget.

## WHEN WILL I SEE RESULTS?

You can start seeing results in as little as 3 weeks, however most people see results 60-90 days after treatment, depending on the area. Your body will continue to flush out fat cells for up to 4 months.
